

Rabbit recovery record

Daily feeding log - print a fresh copy for each day.

Pet name:

Date / carer:

The feeding plan agreed with your vet

Formula / flavour:

Mixing instructions (dry powder + water):

Daily target / amount per feed / feeding times:

Adjustments for voluntary eating, as advised:

Feeds actually given

Date	Time	Product / batch*	Dry powder prepared (g)	Offered (mL)	Accepted (mL)	Method / tolerance

*If one batch supplies several feeds, record its dry powder once and give it a batch label. Use that label for later feeds. Note spills or food spat out; do not count these as accepted.

Total prepared food accepted today (mL):

Recording tool only: this sheet does not calculate a feeding dose. Powder weight and prepared volume are different measurements; keep the prescribed mixing method consistent.

Care & observations

Daily companion page - bring both pages to your veterinary review.

Pet name:

Date / carer:

Weight + unit / time / weighing conditions:

Medication & treatment record

Date	Medicine / treatment	Prescribed dose + unit / route	Due time	Given time / missed dose / notes

What you noticed

Date	Time	Independent eating / amount	Droppings / changes	Comfort / activity / feeding tolerance

Record foods eaten willingly, approximate dropping output and changes in posture or feeding tolerance.

Weigh under consistent conditions at the frequency advised by your vet.

Vet contacts & next steps
